TWIN ANGLE COCK
MRP: 960/-

FAUCETS PARTS DETAILS

MANUFACTURING PROCESSES

SOURCING

Brass is source from the most reputed vendors and is inspected by QC staff before it is sending for casting.

POLISHING

The grinded pieces are polished on high speed polishing machines by experienced workers to achieve perfect surface with high glass & shine.

CASTING

Virgin brass and scrap is casted in various molds as per the pattern using the Die Casting Process.

PLATING

The polished and okayed pieces then undergo the process of plating finishing.

MACHINING

Casted products are machined as per the design requirements to create threads.

TESTING

The pieces are then checked for surface defects. The water carrying components are pressure tested using Hydraulic Testing machine to detect any leakage in the product.

GRINDING

The machined product is then grinded using belt grinders to achieve smooth finishes without sharp edges.

ASSEMBLY

Then pieces are assembled and once again checked and tested with Hydraulic Pressure. The tested pieces are then packed in corrugated boxes and ready for dispatch.
